Sage Timberline Office

*Your Update!* For Construction and Real Estate

### Streamline the Process of Installing Updates.

In the recent Summer Update for Sage Timberline Office, we added a powerful new feature. Sage Installation Manager lets you install software updates to numerous workstations from a single location. For example, you can install Installation Manager on your server, and use it to install updates to each individual workstation instead of manually updating one workstation at a time—a much more efficient use of your time.

Perform a variety of functions directly from the server, including the ability to:

- Download and manage available updates.
- View the workstation's status (i.e. software version, restarting, etc.) and, when necessary, reboot individual workstations.
- Install and monitor the progress of workstation updates.
- Access workstation installation logs after updates.

For more information about these new capabilities, contact your business partner or reference the [9.6 Software Updates](#) notice.
